SUMMARY

Performance-driven **Full-Stack Developer** with strong algorithmic problem-solving abilities and hands-on experience building scalable web applications. Proficient in **Java**, **JavaScript** and the **MERN** stack with a solid understanding of software engineering principles, databases and DevOps automation. Passionate about solving complex algorithmic challenges and designing secure, performant APIs to enhance user experience at scale.

Education

Sri Shakthi Institute of Engineering and Technology <i>B.Tech</i> : INFORMATION TECHNOLOGY 8.5 CGPA	• Sep 2023 – present Coimbatore, Tamil Nadu
Vivekananda Matriculation Higher Secondary School <i>HSC</i> : 86.3%	• Jan 2023 Sirkali, Tamil Nadu

Projects

Hashtag – Real-Time Messaging App

Technologies: React.js, Node.js, Socket.io, GeoJSON, JWT, Jenkins, Docker, AWS, Terraform

- A dynamic communication platform featuring location-based room discovery and hashtag-driven chat environments for high engagement networking.
- **Core Value:** Prioritizes privacy and relevance through ephemeral messaging logic (24-hour expiration) and proximity-based community connection and enhanced user interfaces with frequent message updates.
- **Key Contributions:** Integrated Geo-JSON queries for location discovery, developed multi-directional data flow using Socket.io for pragmatic tradeoffs on speed of messages and implemented server-side logic for automatic message expiration.

SkyFlow – DevOps & Cloud Automation

Technologies: Jenkins, Docker, AWS, Terraform, Ansible, Prometheus, Grafana, GitHub

- A comprehensive infrastructure project designed to bridge the gap between development and operations by automating the entire software delivery lifecycle including microservices styled architectures.
- **Core Value:** Eliminates environment inconsistency and manual deployment errors through high-level automation, infrastructure as code, and real-time observability.
- **Key Contributions:** Architected a multi-stage CI|CD pipeline using Jenkins and Docker, provisioned AWS resources via Terraform, and established a full-stack monitoring suite with Prometheus and Grafana.

GesticStudio – Gesture-Controlled 3D design studio

Technologies: MERN Stack, Three.js, Media-Pipe Hands, CSS3

- Built to redefine human-computer interaction in virtual spaces, this editor translates physical hand movements directly into digital creation and features a global gallery for creators to share their work.
- **Core Value:** Delivers a highly intuitive, peripheral-free 3D modeling experience while fostering a collaborative community where users can persistently save their voxel vector data and showcase their models globally.
- **Key Contributions:** Integrated Media-Pipe to translate 10+ physical gestures into Three.js rendering actions. Built a data serialization pipeline to store complex voxel vectors for saving and public showcasing.
- **Current Focus:** Optimizing gesture recognition latency, refining the precision of complex spatial interactions, and scaling the storage architecture to support the seamless uploading and global rendering of user-generated voxel models.

Skills

Languages: Java, JavaScript, SQL
Web Development: React.js, Node.js, Express.js, Spring Boot
Cloud & DevOps: Git, Docker, Jenkins, Terraform, AWS(EC2 , S3, EKS), Argo CD, Ansible
Databases: MySQL, MongoDB, Firebase Realtime Database
Soft Skills: Dynamic Problem Solving, Critical Thinking, Constructive Collaborator, Attention to detail
Areas of Interest: Full-Stack Development, DevOps & Automation, System Design, Real-Time Web Applications

Achievements and Certifications

- **Competitive Programming:** Solved **500+** algorithmic problems on **LeetCode** and demonstrating consistent proficiency in Data Structures and Algorithms (**DSA**), and advanced problem-solving techniques.
- **Software Engineering Virtual Experience** – JPMorgan Chase & Co. (Forage) | Jan 2026
- **Software Engineering and Agile** – Infosys Springboard | Sep 2025
